Education

Pukyong National University

Mar 2024 – Feb 2026

MS Degree in Industry 4.0 Convergence Bionics Engineering (Full time)

Busan, Republic of Korea

- **GPA:** 4.17/4.5
- **Thesis Topic:** Edge Computing Approach for Golf Club Path Recognition using Self-Supervised Learning

Ho Chi Minh City University of Technology

Aug 2019 – Nov 2023

BS Degree (Honors) in Mechatronic Engineering (Full time)

Ho Chi Minh, Vietnam

- **GPA:** 8.22/10
- **Thesis topic:** Damage detection of steel beam using CycleGAN

Research Experience

Research Assistant

Mar 2024 – Present

NanoBioMechanics Laboratory (NBMLab) [Website](#)

Busan, Republic of Korea

During my time at NBM Lab, I developed an IoT system integrated with AI for smart devices to support healthcare applications. I designed and implemented real-time data acquisition pipelines for motion analysis. My research focuses on using machine learning models for biomedical signals collected from sensors.

1. Non-contact Sensor Vital Signs Monitoring System [Link](#)

- Developed a non-contact monitoring system using flexible sensors to track heart rate and respiratory rate.
- Integrated AI models to predict vital signs and detect anomalies for early health assessment.
- Designed a cloud-connected system with a mobile application for remote health monitoring and real-time data visualization.

2. Smart Device with Sensors Fusion for Vital Signs Monitoring [Link](#)

- Developed a smart chair integrating multiple sensors (PPG, BCG, ECG) to monitor physiological signals continuously.
- Implemented sensor fusion algorithms to enhance accuracy in heart rate and respiration measurement.
- Designed an AI-assisted system for health status detection and anomaly identification in real time.

3. Smart Golf Swing Analyzer System [Link](#)

- Wearable device development includes: smart gloves, smart belts, smart shoes
- Integrated system connecting AIoT, cloud to improve skills in golf swing
- System analysis software design, mobile app

4. Wireless sensor network [Link](#)

- Developed a wireless sensor network to collect and process data from multiple sensor nodes.
- Designed a system to reconstruct body movements based on real-time sensor data.
- Implemented data synchronization and optimized communication protocols for accurate motion analysis.

Research Assistant

Oct 2020 – Jan 2024

UID Lab [Website](#)

Ho Chi Minh, Vietnam

At UID Lab, I worked on hands-on projects in Machine Learning and Artificial Intelligence. I explored embedded systems and robotics to integrate software and hardware for biomedical signals. In addition, I conducted research in Computer Vision, Machine Learning algorithms, and Deep Learning architectures to design and implement neural network modules.

1. PPG Signal and Application in the Medical

[Link](#) 

- Research and design embedded systems and PCB for PPG signal measurement using the heart rate sensor
- Developing software to retrieve sensor data from the device to the computer
- Developing and programming the device's microcontroller with real-time operating system (RTOS) and Bluetooth Low Energy (BLE) capabilities for signal acquisition and transmission.

2. Study on Damage Detection of Steel Beam Using AI

- Utilizing vibration data through signal processing, for anomaly detection in steel beams.
- Develop and deploy using the CycleGAN architecture.
- Vibration data is encoded to lower dimension and three-sigma rule to detect and visualize damage.

Technical Ability

Languages: C/C++, C#, Python, Matlab

Machine Learning Frame Work: PyTorch, TensorFlow

Model Deployment & Optimization: Quantization, ONNX, TFLite, TensorRT, Edge AI

Tools: Docker, Git, CUDA, TensorBoard

Application Development: Mobile Applications (iOS, Android), WinForm

Embedded Systems: MCU, PCB Design, Analog Front End, Low-Power Design, RTOS

IoT & Cloud Integration: Firebase, Azure, MQTT, TCP/IP, UDP

Languages

English: Duolingo English Test (DET) - 110, CEFR B2

Vietnamese: Native

Awards

2025 PKNU Fire Grant

2025 Brain Korea BLUE Scholarship Award
